WORK EXPERIENCE

Frontend Engineer Jan. 2025 – Jul. 2026
Shenzhen Neostar Intelligent Technology Co., Ltd. Shenzhen, China
English-learning platform: ∼30,000 student tablets; ∼8,000 daily active devices at peak.

- Independently built reusable **React/TypeScript** components for eight question types in an existing library; synchronized answer state for restoration and review and preserved mappings during option shuffling.
- Built a responsive **React/TypeScript** teacher dashboard with API integration for course schedules and class rankings; persisted class selection and handled changes in available classes to keep the selected class valid.
- Built **React/TypeScript** homework workflows with form validation for classes, groups, and individuals; resolved recipient groups into student IDs to check duplicates and restored drafts after page reloads.
- Built staged **React Native** quizzes for semifinals and finals; coordinated sequential Expo Audio playback with quiz transitions and timeout submission, releasing audio resources when leaving a screen.
- Integrated native classroom events with **React WebView** to coordinate countdowns, early termination, and submission; added submission guards and event cleanup to handle repeated events and screen exits.
- Built daily/weekly reports for parent and teacher WeChat Mini Programs using **Taro/TypeScript**; transformed API responses for **ECharts** data visualization, aligning weekly records and handling missing daily entries.

TECHNICAL SKILLS

Web Technologies	JavaScript, TypeScript, HTML, CSS
Frameworks	React, React Native, Taro (WeChat mini-programs)
Tools	Git, Vite, Webpack
Backend & Data	Node.js, Firebase, MongoDB, SQL
Languages	English, Mandarin, Cantonese

EDUCATION

Northeastern University Sep. 2022 – Dec. 2024
MSc in Computer Science, GPA: 3.96/4.0
The University of Hong Kong Sep. 2019 – Sep. 2020
MSc(Eng) in Industrial Engineering and Logistics Management
Shanghai Jiao Tong University Sep. 2015 – Jun. 2019
B.E. in Mechanical Engineering

RESEARCH & PUBLICATION

Language Models for Customer Review Analysis Jan. 2024 – May 2024
Master's Capstone | Code | Artificial Intelligence Review (Aug. 2025)

- Benchmarked distilBERT, ELECTRA, Flan-T5, and Flan-UL2 in PyTorch for sentiment classification and correlation tasks on customer reviews, comparing predictive performance and computational cost.
- Proposed a tiered SLM/LLM framework balancing accuracy and computational cost; co-authored "Do You Actually Need an LLM? Rethinking Language Models for Customer Reviews Analysis".
