WORK EXPERIENCE

Frontend Engineer

Jan 2025 - Jul 2026

Shenzhen Neostar Intelligent Technology Co., Ltd.

Shenzhen, China

English-learning products across ~30,000 student tablets; ~8,000 peak daily active devices.

- Independently built reusable components for eight question types in an existing **React/TypeScript** npm library, standardizing quiz rendering and interactions across student, teacher, parent, and content-authoring apps.
- Maintained the shared quiz library with roughly monthly versioned **npm** releases and production bug fixes; implemented answer restoration and review workflows, preserving answer mappings during option shuffling.
- Built student tablet modules for homework, curriculum-aligned practice, and video learning; integrated native classroom events via **WebView** with countdowns, early termination, submission guards, and listener cleanup.
- Built **React/TypeScript** teacher dashboards for schedules and rankings through REST APIs; delivered class, group, and individual assignments with form validation, recipient deduplication, and draft restoration.
- Built multi-stage **React Native/Expo** quizzes for a city-level English competition; coordinated sequential audio playback, quiz transitions, and timeout submission, restoring answers and freeing audio resources on screen exit.
- Built daily and weekly reports for parent and teacher WeChat Mini Programs using **Taro/TypeScript** and **ECharts**; transformed API responses into chart data, aligned weekly records, and handled missing daily entries.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, HTML, CSS, SQL
Frontend	React, React Native, Taro, Tailwind CSS, ECharts
Tools & APIs	REST APIs, Git, Vite, Webpack, CI/CD (Alibaba Cloud Yunxiao Flow)
Backend & Data	Node.js, Firebase, MongoDB

EDUCATION

Northeastern University | MSc in Computer Science | GPA: 3.96 / 4.0 — Sep 2022 - Dec 2024

The University of Hong Kong | MSc (Eng), Industrial Engineering — Sep 2019 - Sep 2020

Shanghai Jiao Tong University | BE in Mechanical Engineering — Sep 2015 - Jun 2019

RESEARCH & PUBLICATION

Language Models for Customer Review Analysis

Jan 2024 - May 2024

Master's Capstone | Code | Artificial Intelligence Review (2025)

- Benchmarked distilBERT, ELECTRA, Flan-T5, and Flan-UL2 in **PyTorch** for sentiment classification and correlation tasks on customer reviews, comparing predictive performance and computational cost.
- Proposed a tiered **SLM/LLM** framework balancing accuracy and computational cost for customer reviews; co-authored "Do You Actually Need an LLM? Rethinking Language Models for Customer Reviews Analysis".
